

An intensive, hands-on evaluation of your existing security program with a focus on business risk.

An effective security program doesn't just protect data – it also supports an organization's productivity and reputation on an ongoing basis. A good security program requires a solid foundation where people, process and technology intersect with confidentiality, integrity and availability to provide insight to leaders and stakeholders to reduce risk and increase overall performance. Most of today's organizations face a security gap due to constantly evolving technology, shortage of security talent available, or complex regulations and compliance requirements, and as a result, they struggle to evaluate their security maturity program clearly.

Why Conduct a Security Posture Assessment with Synoptek?

Synoptek's Security Consulting team believes that the key to responsible risk management starts with key foundational basics. By investigating the environment from the data center to critical business processes, Synoptek is able to identify areas of concern that might lead to costly potential impacts. Through structured interviews with key business leaders, Synoptek helps to clarify what's most important – and the strategy for protecting it. Upon completion, **the results and findings will be consolidated and presented as a report** that covers the following in a dedicated conference call:

- A comprehensive enumeration of the identified environment, focused on areas critical to business operations
- Expert analysis of the environment with an eye on risks to the organization and its business interests
- Vulnerability reporting conducted using industry-recognized tools, presented in a manner prioritizing conditions of meaningful positive impact to the risk profile
- Recommendations for services, projects, policies, and changes in process designed to help drive the organization up the Capability Maturity Model and increase resiliency in the face of an ever-expanding threat landscape

Better Understanding of Your Cybersecurity Hygiene with a Security Assessment from Synoptek

Our unique approach focuses on identifying opportunities to improve your security posture and demonstrating options to deliver increased business value. A strong security program activates best security practices upon understanding an organization's needs, culture and business operations. By leveraging the insights delivered from the Security Posture Assessment, you will be better prepared in addressing security challenges by improving your security hygiene and reputation with confidence.

Next Steps: Managed Security Services

Synoptek's Security Posture Assessment may lead to the implementation of Synoptek's Managed Security Services suite of subscribed services. These services include vulnerability management, audit logging, and network anomaly detection services designed to address compliance and asset protection requirements.
