

Cloud for Enterprise

Large and small enterprises can greatly benefit from the cloud to support your innovative and competitive needs. RapidScale's Cloud for Enterprise solution can help enterprises of all sizes maintain multiple business units and remote offices while remaining productive, connected, and innovative at all times.

Cost Efficiency

Enterprises inevitably end up needing to centralize or upgrade their technology. The switch to Cloud for Enterprise not only saves your IT team time and stress, but also a lot of money in this situation.

Scalability

Cloud for Enterprise allows enterprises to handle limitless amounts of data, quickly and efficiently. You can easily meet the needs and expectations of clients, or changes in demand during peak periods.

Mobility

When employees can be as productive away from the office as they are in it, efficiency increases substantially. For enterprises with multiple locations, this ability is key, as it keeps users collaborative and connected.

Data Analysis

Cloud for Enterprise allows businesses to store huge amounts of data, but it also provides the ability to sift through and analyze it all. This creates a competitive advantage and the chance to gain valuable intelligence.

Accessibility of Data

Many enterprises have employees spread across multiple offices in different locations. With the cloud, your employees will be able to communicate and share files and applications anywhere, using any device. The cloud makes employee integration a seamless process and provides a stable platform for everyone to access the information they need to do their job, boosting efficiency across every company sector.

Cloud for Enterprise can help your business expand. RapidScale lets you easily scale the amount of storage you currently have in the cloud up or down. You can add more computing resources and data storage to support the growth of your business without having to pay for more than what you need. The cloud ensures you will be able to meet the needs and expectations of your clients without experiencing crashing or unreliable servers.

The cloud takes away the need to constantly buy and configure new hardware and software, and automates the application purchasing process. With these processes simplified through Cloud for Enterprise, you can focus on building new business opportunities.

Implementing cloud computing doesn't need to mean conducting a complete overhaul. Enterprises can apply the technology where it works best for you, maybe starting with small steps and picking up speed as you gain greater confidence in the technology.

Cloud Security

RapidScale delivers nothing but the highest quality protection for your data and information. We have equipped ourselves with the best-in-breed facilities to hold your sensitive information for safe, encrypted storage in our SAS70, SSAE 16 Tier 3, Class 1 data centers. Every one of our data centers feature on-premises security guards, key card protocols, biometric scanning protocols and around-the-clock interior and exterior surveillance monitor access. Our facilities are engineered to the highest of standards in order to ensure your business is running 24x7x365.

Cost Efficiency

One of the biggest advantages of the cloud is that it promotes greater optimization of IT resources and greatly reduces capital expenses and operating costs. Instead of building for maximum capacity, you can purchase cloud space with RapidScale's pay-as-you-go model to meet your specific storage needs. With the cloud, you will never pay more than necessary. RapidScale's cloud gives you automatic updates as well as eliminates the headache of hardware refresh.
