

Cloud for Small Business

RapidScale provides the most cost-effective solution in the SMB market with our pay-as-you-go model, giving small businesses the opportunity to scale up or down at their own pace. RapidScale's state-of-the-art cloud technology will put your business on the same playing field as large corporations while keeping your costs as low as possible.

Cost Savings

SMBs get access to sophisticated capabilities that are normally reserved for large companies, and you get this for low prices. Operational IT work and many costs move to RapidScale.

Staff Flexibility

Small businesses that have employees working in various locations need the cloud to offer users anywhere access to data and applications. This also makes staff collaboration a lot easier.

Security

The security gained from RapidScale's cloud is better than what a small business can afford in the first place, with off-site backup, redundancy, encryption, firewalls, and more.

Business Growth

The cloud environment is familiar and easy to use. The mobility and flexibility offered will lead to more chances for innovation and greater productivity - all things that will drive business.

The SMB Game Changer

Cloud computing can probably make the biggest impact in the SMB segment. Why? Because traditionally, these businesses haven't been able to afford the same services and resources that large companies use, limiting their capabilities.

Now, thanks to the cloud, your small business can access infrastructure and software that was previously out of reach. Rather than focusing on balancing a budget, you can focus on strategy, development and overall growth.

RapidScale's mobile cloud solutions offer SMBs the opportunity to increase productivity and respond better to business opportunities and customer demands. It also gives employees the opportunity to work remotely and access work information from any device at any time, greatly improving collaboration and communication across every sector of your business.

Cloud for Small Business will put your SMB on the same playing field as large corporations. Our cloud technology never runs out of space or becomes obsolete. RapidScale helps businesses smoothly integrate their existing apps and services into the cloud, guaranteeing no time is lost during the transition to new technology.

Cloud Security

RapidScale delivers nothing but the highest quality protection for your data and information. We have equipped ourselves with the best-in-breed facilities to hold your sensitive information for safe, encrypted storage in our SAS70, SSAE 16 Tier 3, Class 1 data centers. Every one of our data centers feature on-premises security guards, key card protocols, biometric scanning protocols and around-the-clock interior and exterior surveillance monitor access. Our facilities are engineered to the highest of standards in order to ensure your business is running 24x7x365.

Cost Efficiency

One of the biggest advantages of the cloud is that it promotes greater optimization of IT resources and greatly reduces capital expenses and operating costs. Instead of building for maximum capacity, you can purchase cloud space with RapidScale's pay-as-you-go model to meet your specific storage needs. With the cloud, you will never pay more than necessary. RapidScale's cloud gives you automatic updates as well as eliminates the headache of hardware refresh.
