

Mimecast Awareness Training

Increase Your Employees' Knowledge of Basic Security Issues and How to Respond

RapidScale, a Cox Business company, offers Mimecast Awareness Training, a security awareness training and cyber risk platform that helps you combat information security breaches caused by employee mistakes. Developed by top leadership from the U.S. military, law enforcement and intelligence community, the training makes employees an active part of your defense, instead of your biggest risk.

Persistent Training

Implement a persistent, non-intrusive training methodology to change behavior, improve knowledge and retention around core security issues, and ultimately lower risk.

Engaging Content

The engagement that Mimecast's Awareness Training drives and the results it delivers are difficult to match, largely thanks to the best content in the industry.

Efficiency

With just 2 to 3 minutes of training a month required for your busy employees, maintain the highest possible level of organizational security awareness.

Employee Ownership

Build your human firewall by working to give all employees a stronger sense of individual responsibility for protecting the organization.

Features

- **Engaging Training:** 3 to 5-minute video-based training modules deliver learning in manageable and digestible blocks.
- **Real World Testing:** The platform regularly evaluates employees and tracks indicators across the three root causes of human error - knowledge, awareness and attitude.
- **Risk Scoring:** Focus on the greatest areas of risk and need by determining who your riskiest employees are based on behavior and how likely they are to be attacked.
- **Custom Remediation:** Customized scenarios can be created to continuously assess and train high-risk employees.

Address Human Error

When the anatomy of successful cyberattacks is analyzed, nearly all of them have one thing in common – some user, somewhere, did something that could have been avoided. Despite the most advanced protections that can be put in place, and despite the best threat intelligence that can be brought to bear, organizations remain vulnerable because of one key factor: human error.

People are – and likely always will be – the weak link in the chain. Yet, efforts to reduce the very real risk they represent are failing. Organizations are pouring billions of dollars into security and awareness training, but these investments are not translating into results. In fact, the probability that companies of all types and sizes will experience a security breach is greater today than it was just a few years ago.

Security Awareness Training Done Right

When training is unengaging and unenjoyable, people don't learn. If they are not armed with the knowledge of what to look out for and what to do when the situation arises, they will make mistakes. And, in what is an act of self-defense, they will treat security as "somebody else's problem" and develop a dismissive attitude about training. This negative process reinforces itself over time, making insufficient training programs not just useless, but harmful. It's time to break the cycle. The time for a new approach has arrived.

Effective training is engaging. Short. Relatable. It is persistent, reinforcing key concepts regularly. Mimecast Awareness Training is all that and then some. The training videos are scripted by world-class comedy writers and performed by actors who are spectacularly right for their roles. And the topics covered are shaped with the help of top CISOs focusing on the topics that matter the most for cyber risk management today.
